## COOPERATIVE TEACHERS CREDIT @uNION

## BALANCEDLIFE" a classroom simulation

## Post Lesson: Calculating Budget Categories

## Notes to the Teacher:

This lesson asks the students to calculate percentages. Building a household budget that works requires benchmarks (guidelines) for each budget category. These spending benchmarks are a percentage of the overall household budget.

During the BALANCED Life Budget Simulation, your students made many decisions about how they spent their money, given their life scenario. Now, post-simulation, they can practice calculating budget category percentages for various net incomes.

## When to use the lesson:

This practice will help the student think about their budget simulation a second time as they calculate percentages based on national averages.

## Objectives of the Lesson:

1. Understand what the national averages are for various budget categories
2. Demonstrate the ability to calculate percentages for budget categories

## Start the conversation with your students:

- What is a budget category? Name a couple categories we had to make budget decisions for in the simulation?
- What is a national average?
- Are there budget categories that you think your area has a higher or lower than average cost for?

## Vocabulary:

- Budget Category: Could be anything the person budgeting routinely spends money on. Common categories include: Housing, Transpiration, Child Care, Food, Utilities, Saving, Medical, etc....
- National Average: The average value (\% of overall budget, for example) for something across a particular nation, in this case the United States.
- Percentage: A proportion of a whole, the amount in each hundred $(50 / 100=50 \%)$

To calculate percentages use the formula: P\%*X(salary)=Y(Portion of Income)
If we made $\$ 20,000$ per year and we wanted to know what $20 \%$ of our salary was so we could allocate it towards housing, we would use this equation: $20 \%$ * $\$ 20,000=\mathrm{Y}$.

$$
Y=\$ 4,000
$$

| Budget Category | National Average (Percentage Range) | Net Income \$20,000 |
| :--- | :--- | :--- |
| Housing \& Utilities | $20 \%-35 \%$ | $\$ 4,000-\$ 7,000$ |

## Student Handout:

$\qquad$
Lesson: Calculating Budget Categories

## Vocabulary:

- Budget Category: Could be anything the person budgeting routinely spends money on. Common categories include: Housing, Transpiration, Child Care, Food, Utilities, Saving, Medical, etc.
- National Average: The average value (\% of overall budget, for example) for something across a particular nation, in this case the United States.
- Percentage: A proportion of a whole, the amount in each hundred ( $50 / 100=50 \%$ )

To calculate percentages use the formula: $\mathbf{P \% * X ( s a l a r y ) = Y ( P o r t i o n ~ o f ~ I n c o m e ) ~}$
For example, If we made $\$ 20,000$ per year and we wanted to know what $20 \%$ of our salary was so we could allocate it towards housing, we would use this equation: $20 \% * \$ 20,000=\mathrm{Y}$.

$$
Y=\$ 4,000
$$

| Budget Category | National Average (Percentage Range) | Net Income $\$ 20,000$ |
| :--- | :--- | :--- |
| Housing \& Utilities | $20 \%-35 \%$ | $\$ 4,000-\$ 7,000$ |

Practice: Let's Calculate Percentages (\%)

| Budget Category | National Average <br> (Percentage Range) | Net Income <br> $\$ 25,000$ | Net Income <br> $\$ 35,000$ | Net Income <br> $\$ 45,000$ | Net Income <br> $\$ 55,000$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Housing \& Utilities | $20 \%-35 \%$ |  |  |  |  |
| Transportation | $10 \%-15 \%$ |  |  |  |  |
| Food (grocery \& dining out) | $10 \%-15 \%$ |  |  |  |  |
| Debt Payment or Savings | $8 \%-10 \%$ |  |  |  |  |
| Clothing | $3 \%-5 \%$ |  |  |  |  |
| Education | $2 \%-3 \%$ |  |  |  |  |
| Entertainment | $4 \%-6 \%$ |  |  |  |  |
| Charity | $3 \%-5 \%$ |  |  |  |  |
| Healthcare (Out-of-Pocket) | $6 \%-10 \%$ |  |  |  |  |

Question: In what categories are you willing to cut back on, in order to fund other categories more heavily? What budget categories are you willing to spend more on?
